Hi Maryam,

EPA concurs with this approach. EPA will plan to coordinate with DTSC in the coming days to develop details for the approach you laid out.

Best regards,

Sara

Sara:

Based on our conversations over the past few days, DTSC is proposing the following:

1. Removal of PCB concentrations in excess of 0.22 mg/kg, with lateral and vertical confirmation sampling demonstrating clean margins;
2. Sampling of all currently designated residential lots. A composite sampling approach is being proposed; and,
3. EPA and DTSC are discussing options for areas of the property that are not currently designated for residential development, but may be developed for residential purposes in the future.
